Differential gain	DG	Input a 2.0V <sub>P-P</sub> (1.0V <sub>P-P</sub> for MM1512) to SG1, input a chroma signal to SG2, and measure differential gain at TP2. APL = 10 ~ 90%
Differential phase	DP	The same as for DG, but measure differential phase.
Y output dynamic range	V <sub>DY</sub>	Input a 100kHz sine wave to SG1. Measure V <sub>DY</sub> , the maximum amplitude under THD 1%, at TP2.
C output dynamic range	V <sub>DC</sub>	Input an APL 50% luminance signal to SG1 and input a chroma signal to SG2. Change the chroma signal amplitude and measure V <sub>DC</sub> , the maximum amplitude where there is no waveform distortion at TP2.
