## 3-pin Positive Output Low Dropout Voltage Regulator (50mA Type)

### Overview

The AN8000 series is 3-pin low-dropout fixed positive output monolithic voltage regulators. Since their power consumption can be minimized, they are suitable for battery stabilizing power supply and reference voltage. Thirteen types of output voltage are available ; 2V, 2.5V, 3V, 3.5V (TO-92 only) , 4V, 4.5V, 5V, 6V, 7V, 8V, 8.5V, 9V, and 10V.

### Features

- Input/output voltage difference : 0.3V (max.)
- Output current of up to 50mA
- Low bias current ; 0.6mA (typ.)
- Output voltage ; 2V, 2.5V, 3V, 3.5V (TO-92 only) , 4V, 4.5V, 5V, 6V, 7V, 8V, 8.5V, 9V, and 10V.
- Over-voltage protective circuit built-in.

## ■ Application Circuit

- The AN8000/AN8000M series has IC internal gain increased in order to improve performance. When the power line on the output side is long, use a capacitor of  $10\mu\text{F}$ .  
For the capacitor on the output side, attach it as close to the IC as possible.
- When using at a low temperature, it is recommended to use the capacitors with low internal impedance (for example, tantalum capacitor) for output capacitors.
