DESCRIPTION

The TS431 is a low voltage three terminals programmable shunt Voltage Reference. The output voltage can be set to any value between V_{ref} (1.24V) and 6V with two external resistors. The TS431 is able to operate at a lower voltage (1.24V) and lower cathode current than the widespread TL431 and TL1431 shunt voltage reference.

When driving an optocoupler, the TS431 is particularly interesting to regulate 3.3V switching power supplies.

1. Limits are 100% production tested at 25°C. Limits over temperature are guaranteed through correlation and by design.

2. ΔV_{ref} is defined as the difference between the maximum and minimum values obtained over the full temperature range.

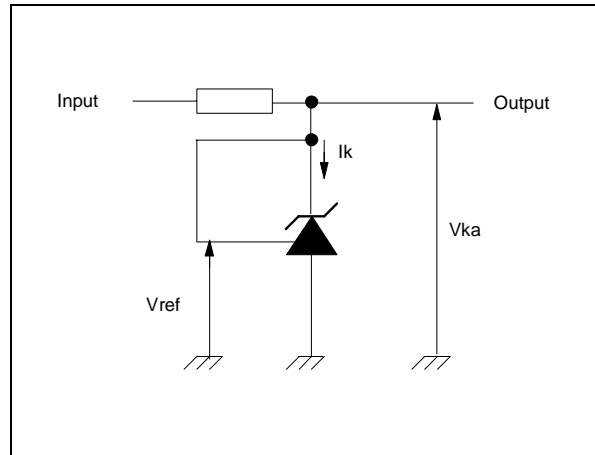

$\Delta V_{ref} = V_{ref\ max.} - V_{ref\ min.}$
