

## Programmable negative supply IC

# BD6112FVM

### ● Description

BD6112FVM is a charge-pump negative supply IC with a built-in regulator. The charge-pump block inverts the positive supply voltage in the VBAT pin into a negative voltage, which generates from the NEGOUT pin. The regulator block stabilizes this negative voltage with low-noise that produces from the OUT pin. Output voltage values of this regulator can be controlled by voltage value inputted to the VIN pin and determined by  $OUT = -1.6 \times VIN$ .

### ● Dimension (Units : mm)

MSOP8

### ● Features

- 1) Built-in high efficiency, inverting charge-pump
- 2) Built-in negative voltage regulator  
(low noise, output voltage variable)
- 3) Built-in standby SW (pull down resistance 1M $\Omega$ )
- 4) Ultra small MSOP8 package

### ● Applications

Small terminal devices such as cellular phones, PHS, and PDA etc.  
Other equipments driven by battery required for negative voltage.

### ● Absolute Maximum Ratings (Ta=25°C)

Parameter	Symbol	Limits	Unit
Maximum applied supply voltage	VBAT	-0.3 ~ +6.0	V
Maximum applied input voltage	VIN	-0.3 ~ +6.0	V
Power dissipation	Pd	350 *	mW
Operating temperature range	Topr	-30 ~ +85	°C
Storage temperature range	Tstg	-55 ~ +125	°C

\* Derating : 3.5mW/°C for operation above Ta=25°C

● Recommended Operating Conditions (Ta=25°C)

Parameter	Symbol	Min.	Typ.	Max.	Unit
